- Developed multiple websites and blogs for various companies and bloggers.
- Worked as a Lead Developer in a startup,
  - **Responsibility**: Design and Implemented complete architecture of website in JS stack.
  - **Website**: http://engikart.com

MAJOR PROJECTS

1. **Project Title:** *Real Time Collaborative Technical Interview Web Tool*

   Project Details: We developed an online coding environment for conducting coding interview. We provided an online editor where candidate and interviewer can collaboratively write code, with automated judging to make the task of evaluating the candidate performance easier and chatting and video calling to communicate each other.
   Also created job portal that tracks candidate request and HR can choose selective candidate and the schedule an interview.

   Technologies involved: J2EE6- servlet, jsp, hibernate, javascript, websocket, bootstrap, codemirror, HTML, CSS, webRTC.

   Role:
   - Requirements Gathering.
   - Design whole structure, Data Flow of the project.
   - Develop all required bean classes and controllers.
   - Develop Job portal UI.

Educational Qualifications:

o Computer Science & Engineering (2015)
   Grade   : First Class

o Higher Secondary Education (2011)
   Percentage   : First Class

o Secondary School Education (2009)
   Percentage   : First Class with Distinction
